

# All Europe Satellite tv

Andrew Baber

# All Europe Satellite tv

I offer two types of system for receiving the main European countries satellite tv channels :

1. All Europe ( [last page](#) )
2. All Europe and UK ( this page )

UK Channels can be added too – Not only the main BBC/ITV/Ch4/Ch5 Freesat channels but all the other Astra 2 channels.

French main channels are all encrypted so you can choose to include or exclude the French if these are not important to you, the Non-French version uses a different receiver, but the same dish.

The “All Europe with UK” package has German, French, Italian, Spanish and UK free to air channels. Russian and Polish free channels can also be added.

Click the Quote Me button to get a FREE map survey and Quotation for

European Package All-Europe + UK below are all the channels in this package:

France, Germany

Italy, Spain

Russia, Poland

UK channels can be added too

# All Europe Satellite tv

In the South the wide angle dish will work ok but due to problems with the new Fransat satellite, installations above London (51 degrees latitude), a larger dish is required.

## LONDON + South UK

The Wide Angle Force Frontier T55 Toroidal style dish with 4 Inbs , with tm1 or similar low noise high gain Inbs. This remarkable combination has been tested by me over many years of installations, in all areas of England Wales and Scotland , giving good signal strength.

What is a Toroidal dish? Its main property is that the reflectors enable a uniform coverage throughout its 40 degrees, unlike the typical normal ( Parabolic ) dish which has great signal for centrally positioned Inbs but towards the edges the signal falls off

# All Europe Satellite tv

**1m size dish works fine from Bristol Lat 51deg, up to Carlyle lat 54 deg**

A 1metre dish of this type with 2,3 or 4 lnb's is the multi-sat dish used above 51 degree latitude up to 54 degrees ( Newcastle /Carlyle ) . The dish is a standard parabolic type, so does not have the wide angle characteristics, an additional Sky mini dish is needed to cover the UK channels.

# All Europe Satellite tv

What receiver will I get with this package? — The German made Technisat receiver complete with French card.

# All Europe Satellite tv

Also available – the Technisat DigiPlus receiver for UHD 4k , complete with French card

This will work with ALL televisions ( HD or UHD) and makes provision for the future

All Europe - With non Encrypted French only

# All Europe Satellite tv

If the French main channels TF1 etc are NOT needed then you can use this Budget priced Amiko They are good general FTA – free to air receivers and will still receive the non-encrypted French channels TV5 monde, Arte, I 24 News, France 24, CCTV FR, M6 boutique, BFM, BFM business, Canal+ ( shows free programmes twice a day without a subscription ) , CNews, LCP, EuroNews
